Lessons from Hurricane Ian that Florida must heed

Lessons from Hurricane Ian that Florida must heed

By Orlando Sentinel

Over the past several decades, the number of cancer deaths due to hurricanes has been on the rise. As the state of Florida, we must continue to prioritize the safety and well-being of our citizens. We must learn from the lessons of Hurricane Ian and implement strategies to prevent future disasters.

Our thoughts and prayers are with the families who lost loved ones and with all those affected by this catastrophic event. We must work together to ensure that our state is better prepared for future hurricanes.

Lessons from Hurricane Ian that Florida must heed

Over the past several decades, the number of cancer deaths due to hurricanes has been on the rise. As the state of Florida, we must continue to prioritize the safety and well-being of our citizens. We must learn from the lessons of Hurricane Ian and implement strategies to prevent future disasters.

Our thoughts and prayers are with the families who lost loved ones and with all those affected by this catastrophic event. We must work together to ensure that our state is better prepared for future hurricanes.

Insurance, from the ground up

Recent research into the impact of hurricanes on insurance markets has identified several key areas that require attention.

1. Risk assessment: Insurance companies must improve their risk assessment methodologies to better predict the impact of future hurricanes.
2. Resilience planning: Insurance companies must develop robust plans to ensure that they can meet the needs of their customers in the aftermath of a hurricane.
3. Customer support: Insurance companies must provide clear and timely communication to their customers during and after a hurricane.

These lessons apply to all disaster-resilient planning efforts, not just those related to hurricanes.

A culture of preparedness

Preparing for disasters is not just about insurance companies. It is a collective responsibility that requires the participation of all stakeholders.
